ABSTRACT OF THE DISCLOSURE

An imposition for at least one page frame is applied onto a paper, and a page is disposed in the page frame on a layout in which an imaginary page frame including the page frame is set up. At that time, in the event that the page disposed on the layout juts out the imaginary page frame, a processing interruption section interrupts a series of processing of creating the paper image and outputting the created paper image to the paper, or a paper image creating section creates a paper image after the size adjustment of coinciding the page with the imaginary page frame.
